## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. **Claims 1-9** are rejected under 35 U.S.C. 102(b) as being anticipated by Havard et al. (US5483034).

Havard et al. teach a method for manufacturing a hollow blade for utilization in a stator component or rotor component, the method comprising: positioning at least one support element **2** between two opposite blade walls **1,3** of a hollow blade and joining the support element **2** together with at least one of the two opposite blade walls **1** utilizing laser-welding (col. 1, lines 39-40) from the blade to be joined to the support element **2** outside of the blade (col. 1, lines 7-8) to be joined to the support element **2** so that the joined-together portions of the support element **2** and the joined blade wall **1** form a substantially T-shaped joint (figure 2).

Regarding claim 2, the support element **2** is arranged to extend essentially at right angles to a mean camber line of the blade.

Regarding claim 3, the support element **2** is plate-shaped.

Regarding claim 4, the edge of the plate-shaped support element **2** is connected to the blade wall.

Art Unit: 3726

Regarding claim 5, the support element 2 is positioned inside the blade and then welded firmly to the wall 1.

Regarding claims 6, the contour of the blade 1 forms the shape of an airfoil.

Regarding claims 7-9, the component is "configured for" incorporation into a gas turbine or jet engine or aircraft wing (compare figure 1 of Havard et al. to figure 1 of the instant application).
